Recipe Manager

User Stories

features

As a user, I want to be able to add a recipe to the dataBase of the existing recipes

Implement an add recipe functionality to open a form, enter the details, validate form the frontEnd side and send an API request on submit to add the recipe details to the database

As a user, I want to be able to search recipes using one or more keywords to find new and multiple ideas.

Implement a search functionality that sends an API request to get the data on submit.

Display the search result in the results section in the form of cards components and add pagination for a better organization

Render the recipe in a scrollable modal section by inserting a dynamic html element

As a user, I want to be able to bookmark my favorite recipes for easy access later

Implement the heart icon functionality on each card component to send a request to the backend in order to add the property favorite: true and add the recipe to the favorites list

As a user, I want to be able to find the recipes I added and to see my favourites list whenever I use the app

Display the list of favorites recipes in the results section in the form of card components and add pagination for a better organization
